Differential Earth Inductor, L. Webers type, for determining rapidly the angle of inclination. Two coils, as near as possible duplicates of each other and interchangeable in their bearings, with their axes at right angles to each other are revolved together. The measurement is made with a differential galvanometer and occupies scarcely one minute. The strength of current is equalised in both coils by inserting resistances. The tangent of the angle of deflection is then equal to the ratio of the resistances of both circuits.
